Experiment No. 2

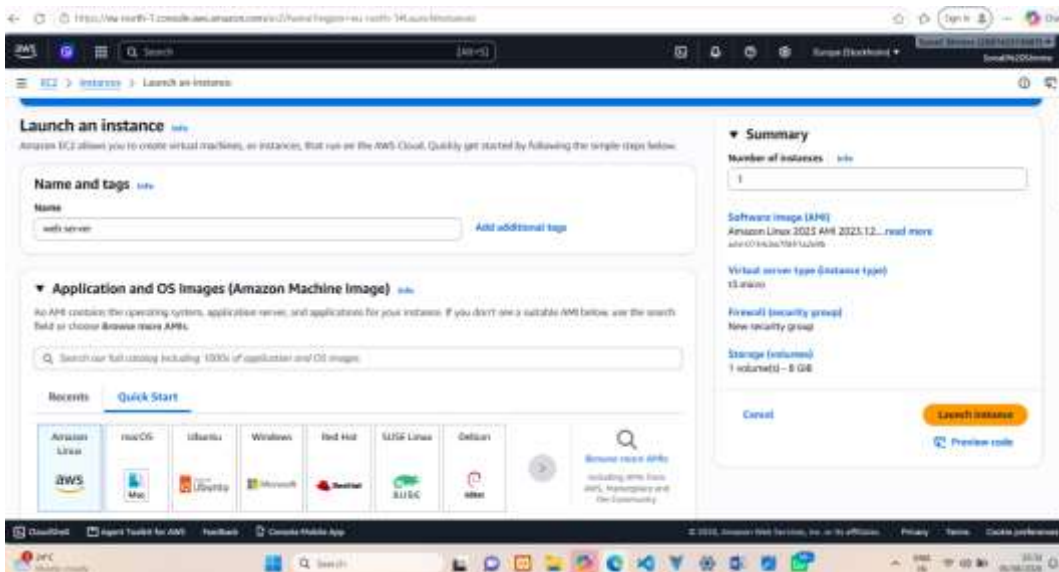

Title : To Launch an Amazon EC2 Instance.

Steps to Launch an EC2 Instance

1. Sign in to the AWS Management Console.
2. In the search bar, type EC2 and open the EC2 Dashboard.
3. Click Launch Instance.

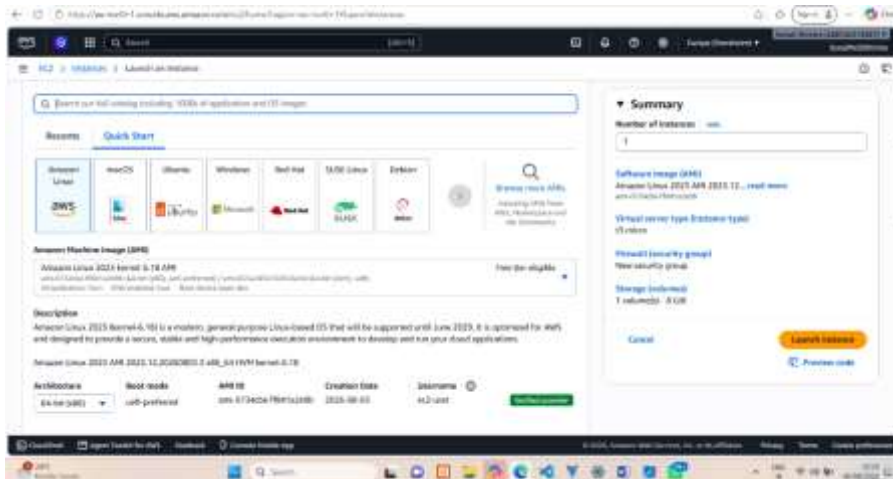

4. Enter a Name for the instance.
5. Choose an Amazon Machine Image (e.g., Amazon Linux 2023 or Ubuntu).
6. Select an Instance Type (e.g., t2.micro etc under Free Tier, if eligible).
7. Create a Key Pair or select an existing one to enable secure SSH access.

Conclusion

Amazon EC2 enables users to quickly create and manage virtual servers in the cloud. In this experiment, an EC2 instance was successfully launched, providing practical experience with cloud-based virtual machine deployment and AWS infrastructure management.
